Manitowoc portal cranes deliver 3 times the capacity while cutting operating and maintenance costs 50%

With standard capacities to 60 tons, standard trolley speeds to 300 FPM, and standard travel speeds to 500 FPM, Manitowoc portal cranes provide an efficient, cost-effective means of handling large volumes of tree-length and shorter timber.

Besides out-performing competitive machines, Manitowoc portal cranes offer many distinct advantages over rubber-tired equipment, such as eliminating need for paved areas and access roads; increasing yard storage capacity up to 400%; reducing expenses for labor, fuel, and equipment maintenance; and minimizing log breakage.

Consider the following Manitowoc features, and you'll discover why Manitowoc portal cranes are the finest investment any woodyard can make.

- **RECTANGULAR TRUSS GIRDER** provides a maximum strength-to-weight ratio and greater rigidity than triangular girders. In addition, Manitowoc's truss girder offers a minimal sail area and exceptionally low wheel loadings.
- **CONTROL HOUSE**, located conveniently within the truss girder, is fully insulated and temperature controlled to protect all major electrical control panels.

• **DC or AC ELECTRONIC CONTROL SYSTEMS** feature advanced thyristor circuitry that eliminates conventional reactors and has no life and/or temperature limitations. Both systems also include diagnostics to simplify on-site trouble shooting.

• **SUPERIOR CAB DESIGN** maximizes operator comfort and productivity. The cab's support frame travels along the girder on its own wheels, eliminating the "bounce" associated with trolley-mounted cabs.

• **INTEGRAL CONTROL CONSOLES** put every operating control within easy reach. All grapple, hoist, trolley, and travel functions are actuated by joystick control. Design eliminates foot pedals, affording the operator an unobstructed view of both grapple and load at all times.

• **SELF-REGULATING SKEW CONTROL SYSTEM** detects skew quickly, and automatically regulates travel motor speed to realign gantry legs. Bi-directional meter in operator's cab provides continuous visual reference.

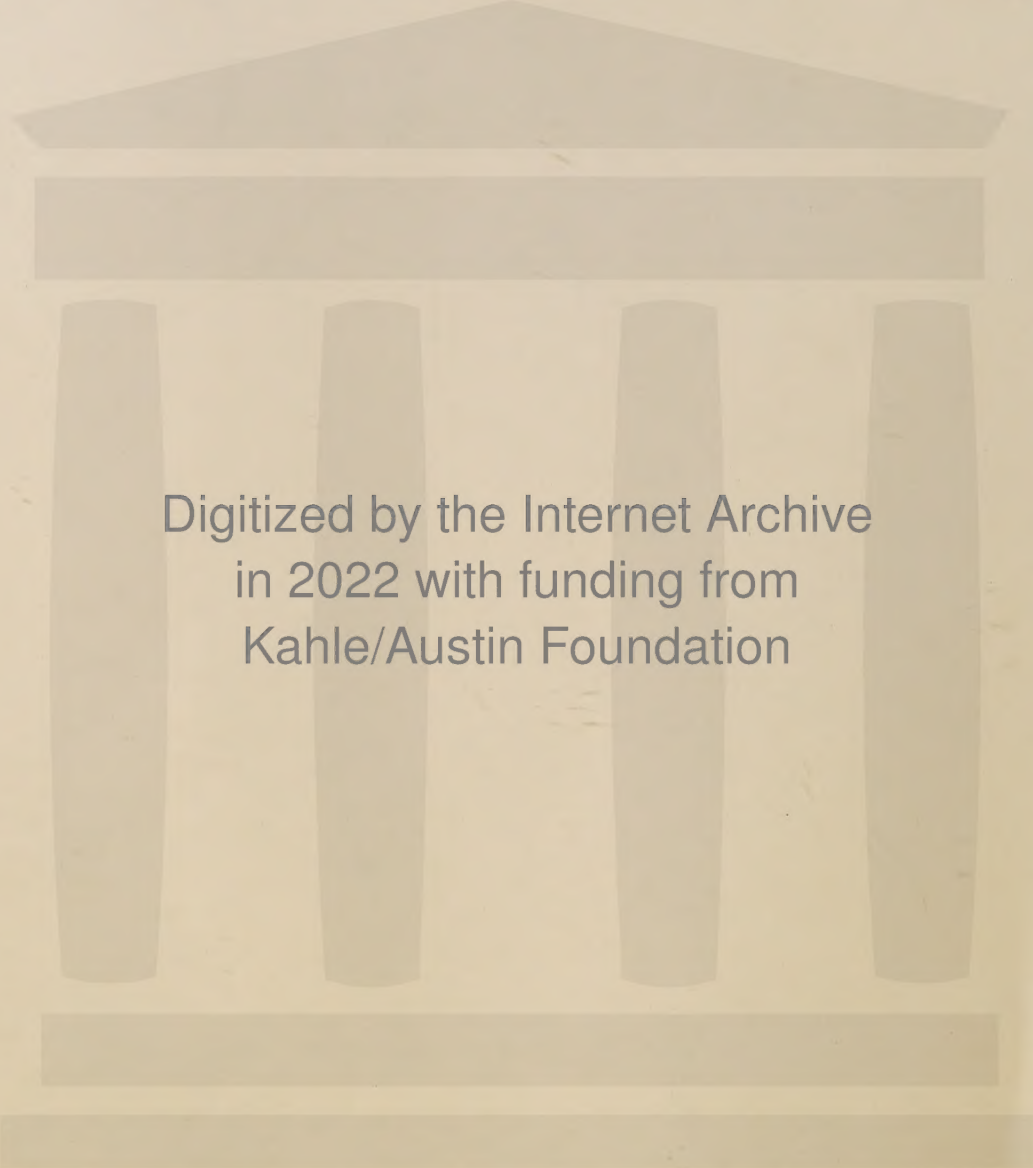

• **GANTRY TRUCKS** are driven independently by electric motors and feature fully-enclosed drive trains running in oil. Each truck pivots on equalizing pins for optimum load distribution and ease of travel.

M-E-C WOOD-BASED DRYER SYSTEM DRYER TECHNOLOGY IS BALLOONING AT M-E-C

Over 150 M-E-C Composite Board Dryer Systems Throughout the World Prove It

M-E-C Dryer Systems have been rising to the technological and operational needs of WAFERBOARD, PARTICLEBOARD, OSB and MDF plants worldwide.

With over 150 composite board dryer systems in successful operation, M-E-C has the experience and winning record to take you to the top in state-of-the-art dryer applications.

Get The Hard Facts On How M-E-C Meets Your Dryer Needs

Our Dryer Systems Technicians have the hard facts about M-E-C dryers for virtually any wood-based application. Please call or write us today and let us share our technology with you for your project.

The 1988 edition of **The Directory of the Forest Products Industry** is designed to provide the industry with a single authoritative source of information on logging, lumber, plywood and panel operations in the United States and Canada. It has been updated to reflect the many thousands of changes that have occurred in the two years since the last edition—new mills, expansions, mergers, acquisitions, and personnel changes—thus keeping pace with the constantly changing North American forest products industry.

Information for this edition was obtained by the editors of **DFPI** from detailed questionnaires sent to independent loggers, mill managers and industry executives throughout the U.S. and Canada. Further information was acquired by telephone from mill and executive office locations, and from our own editorial resources. The resulting data was then edited, cross-checked and compiled by our editorial staff, using computers to ensure the greatest accuracy.

Every effort is made to produce in each edition of **The Directory of the Forest Products Industry** a reference volume that is comprehensive, accurate, current and complete. But the editors cannot accept responsibility for errors or omissions resulting from incorrect or incomplete source data, subsequent changes in corporate organization, personnel turnover or other changes received too late to include.

The editors of **DFPI** thank the many people in the industry who have cooperated in supplying data for this work. We welcome any comments that will help us in our continuing efforts to make this directory as accurate and complete as possible.

BELL FELLER BUNCHER SAWS:

Hardwood, Softwood,
Logs or Pulpwood

Quality production at the Lowest Possible Cost

Across the country loggers are discovering the benefits of using a Bell. Some are felling and bunching up to 25 loads of logs, others up to 16 loads of pulpwood. But production isn't the only reason they're delighted with the machine. The Bell saw head uses a powerful chainsaw for a fast, clean cut—hardwood or pine—up to 24", larger trees with 2 cuts. No fibre pull, compression damage, or splitting—a perfect cut that's worth a premium to the mill.

Next, the Bell is versatile. With low ground pressure (6.8 psi for standard 23.1 tires, 5.5 psi for 28L, or 3.8 psi for 66 x 43 options), the Bell stands up on wet ground as bad as it gets. In fact, with hi float swamps, the Bell is working where only crawler tractors can skid. The Bell method of sawing, then throwing the tree to pile, means excellent stability to work

slopes up to 35%—safely in a comfortable cab.

Production at the right cost makes profits and that's where the Bell shines. For about half of what you could pay for an equivalent capacity feller buncher, you can own a Bell, affordable and inexpensive to run. Powered by a dependable Deutz diesel, savings on fuel consumption of 8-12 gal. per day is a good start. The Bell has a simple hydrostatic drive train that replaces torque convertor, transmission, drive shaft, differential, and planetaries. Saw head maintenance amounts to little more than running a regular power saw.

But what's most important to a production logger is a machine that's reliable and durable. Bell invented the tri-wheel tractor. Now after 20 years, all 3000

machines we've built are still in the field. Bell is a company committed to excellence in product design and support. Our 24 hour parts and service back up program and available 2 year or 4000 hour drive train warranty are part of this commitment.

So whether you're looking to mechanize your logging team or you need to replace a butt munching shear with a more efficient machine, simply call for a demonstration. 1-800-235-5350 or 912-966-2615.

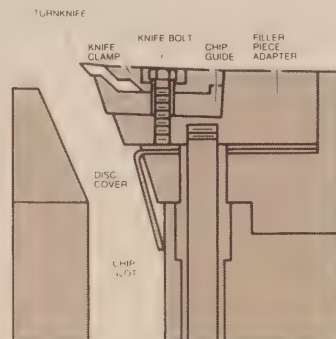

BELL

STRONG SIMPLE MACHINES.

TWO EDGES ARE MORE PROFITABLE THAN ONE.

The result? Greatly improved chip quality, guaranteed.

When the first Turnknife edge dulls, a single worker can quickly turn it over and continue chipping away. When it's time to change blades,

Patented Turnknife II and unique adapter assembly make conversion almost effortless.

it's simply thrown away.

No wonder more than one hundred twenty mills world-wide have already converted to Turnknife II from ITS.

We've proved, when it comes to chipper knives, two edges really are more profitable than one.

Turnknife II makes all other chipper knives obsolete.

See the reversible, disposable Turnknife II in action and you'll know why conventional chipper knives are a thing of the past.

Unlike conventional blades, Turnknife II is precision ground,

lightweight and so easy to maintain it can reduce your mill's woodyard production expenses by one percent or more.

The patented double-edged design cuts expensive downtime to a minimum because each blade is specially crafted to last twice as long *per edge*.

What's more, Turnknife II's unique shape and precision fit insures uniform edge clearance around the chipper disk.

**Turnknife II,
The Cutting Edge.**

"Big Red"

WOOD HANDLING SYSTEMS

Profitability Partnership.

Logs, pulpwood or lumber...big loads or little...at the mill or in the yard...tough jobs demanding rugged performance. Big Red's lift trucks and wood handling systems have met the challenges for more than 60 years. Big Red is your partner in profitability!

With load capacities from 10,000 to 120,000 pounds... innovative attachments... performance based engineering... and Sudden Service parts and service support, Taylor's Big Red machines get virtually any wood handling task done.

Let Big Red increase your bottom line!

YOU NEED IT *When?*

Relax. FOREST TOOL has most replacement parts in stock and ready to ship!

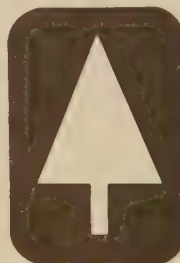

Downtime costs money. You need replacement parts *fast*, and you need them *tough*.

At Forest Tool, you get both. Carbide-tipped debarker tools and wear parts, with twenty times the life of other types. New and rebuilt feed and planer rolls, and chipper and screen replacement parts of high grade alloy steel.

We have a complete inventory of parts for practically all standard-make equipment – Bush, Precision, Beloit, Morbark, Hosmer, Soderhamn and others. Chances are, the part you need is in stock, ready to ship and at prices to save you money.

Edge gluers to meet your exact needs! Non-stop flow production...

Both continuous operation cross-flow and in-line parallel systems equipped with automatic flying cutoff saws available.

Boards can be processed in successive curing stages. An 8-foot press can easily cure boards 24 feet or longer.

for any panel size, lumber or glue.

You can increase your production level up to 36,000 board feet with as few as two operators and still maintain the maximum in quality control by having M-R's engineers tailor the standard, or custom design a continuous-feed edge gluer system to your plant's requirements.

Since the early 40's M-R has been active in the original design and perfection of an extensive line of continuous-feed or batch type dielectric high frequency bonding equipment. If you'd like to know more what we can do for you, write or call today.

M-R's "single-responsibility" package meets all needs.

Mann-Russell's trouble-free designs mean exceptionally low downtimes. Parts are shipped in 24 hours. M-R has a system tailored for each application - structural, profile/step, EGAR, block board core and specialty gluing operations.

Announcing the first combined edition of **LOCKWOOD-POST'S DIRECTORY** of the Pulp, Paper and Allied Trades

For over 100 years, there have been two leading directories for the pulp and paper industry—Lockwood's and Post's. Now these two have merged. The result is off press and ready to mail—the 1988 edition of LOCKWOOD-POST'S. It will be biggest, most comprehensive directory ever published for the North American pulp and paper industry.

ONLY IN LOCKWOOD-POST'S will you find so much detailed data about each mill and plant—over 1,000 pulp and paper mills in the U.S. and Canada—plus 4,000 converting plants and 3,000 paper merchants.

ONLY in LOCKWOOD-POST'S will you find data arranged in such an easy-to-use and easy-to-read 8½ x 11 format.

ONLY in LOCKWOOD-POST'S will you find as accurate and complete a list of management, technical, engineering, sales and administrative personnel—over 16,000 key people in the North American pulp, paper and paperboard industries.

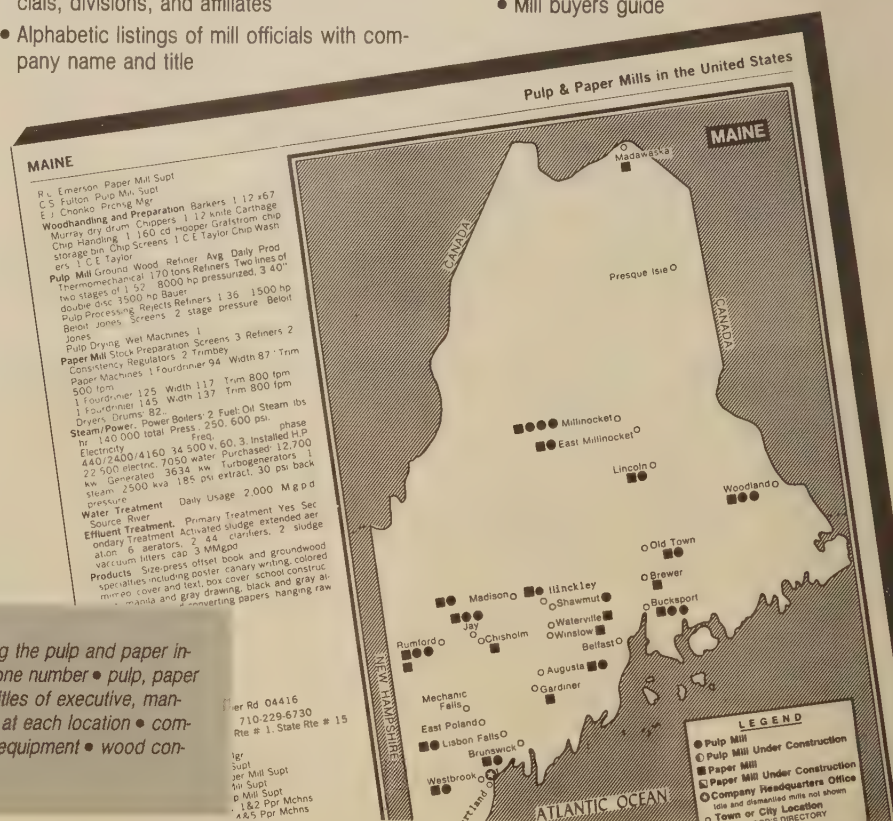

ONLY in LOCKWOOD-POST'S will you find such a comprehensive Buyer's Guide to mill equipment, supplies, chemical and technical and consulting services, classified in over 3,000 categories.

Reserve your copy of the 1988 LOCKWOOD-POST'S DIRECTORY today for 10 days free examination.

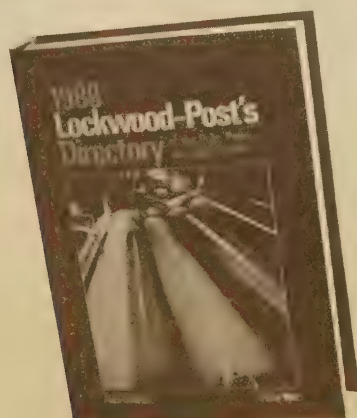

CONTENTS INCLUDE:

- Mills producing pulp, paper, paperboard, roofing felt, or wet processing building board in USA and Canada
- Mill machinery, equipment, and process data
- State and province mill maps
- Executive office listing with company officials, divisions, and affiliates
- Alphabetic listings of mill officials with company name and title

- Detailed listings of U.S. and Canadian paperboard converters and paper merchants
- Watermarks and brands
- Market pulp directory
- Association, schools, and information sources
- Classified mill and plant grades
- Trade name directory
- Mill buyers guide

Compare this sample page with any other directory serving the pulp and paper industry. Note how each mill listing shows: address • telephone number • pulp, paper and board capacity • products and grades • names and titles of executive, management, production, engineering and technical personnel at each location • complete list of mill equipment in use • power and generating equipment • wood consumption and wood handling equipment

Ready for your review

LOCKWOOD-POST'S DIRECTORY Book Dept. • 500 Howard St. • San Francisco, CA 94105

Please send _____ copies of the 1988 LOCKWOOD-POST'S DIRECTORY of the Pulp, Paper and Allied Trades for 10 days free examination. After examining the directory, I may return it without obligation or I will remit on your memo bill at US\$97.50 each (or quantity rate as follows: 5-9 copies, US\$95 each; 10 or more US\$92.50 each), plus postage and mailing expense.

☐ Check here if you prefer the smaller (6" x 9") Traveler's Edition—same mill, executive office, and personnel listings, but without other sections. Buyers' Guide and advertising. US\$92.50 for 1-4 copies; US\$90 each for 5-9; US\$87.50 for 10 or more.

☐ **SAVE!** Check here if you are enclosing payment herewith, including sales tax in CA, GA, IL, MA and NY. Publisher will pay surface postage.

Overseas purchasers: please pay in US dollars, by check drawn on a U.S. bank, credit card or request pro forma invoice. A prompt refund will be sent if you return the directory within 10 days.

LVL — a profitable new product for all types of structural applications

Laminated Veneer Lumber (LVL) offers the building industry a high strength structural material which is available in a wide and flexible range of sizes.

New veneer-based product for growing markets

Thanks to its consistently high strength, stability and dimensional flexibility the demand for LVL is ever-increasing. In the building industry it is particularly suitable for roof and floor structures as well as for numerous other load-bearing applications such as window and door headers, scaffold planks etc.

The Veneerwood System adapts to your needs

DURAND-RAUTE's Veneerwood System for LVL has been developed to provide exactly the right solution whatever your needs in terms of capacity, finished product specification etc.

The right solution may be a 1- or 2-opening line giving moderate capacity which could be expanded later if needed. Alternatively a fully automatic high capacity system for both plywood and LVL is also offered, which gives LVL the economy to compete even in the sawn lumber markets.
